ERD = entity relationship diagram

PK = primary key = identificatorul unic al unei entitati

FK = foreign key = cheia de legatura cu alt tabel
(de obicei PK-ul din alt tabel)

1:1 - one-to-one
entitatea X are o singura entitateY, si vice-versa

1:M - one-to-many
entitate X are mai multe entitati Y, dar entitatea Y e asociata unei singure entitati X

M:M - many-to-many
entitatea X are mai multe entitati Y si vice-versa
